## Introduction to Programming II Project Log

Project title:	Lofi MusicVis
Topic:	Changing needles visual. Week16

## What progress have you made this topic?

I have redone, added, and changed most of the visualization for the Needles function. I added more complexity and movement to the visuals. I have also began to add a different visual look to the Cubes function.

## What problems have you faced and were you able to solve them?

The problem with implementing shaders and WebGl still persisted. I was not abe to find a suitable solution of implementation. I deducted that the persuit to solve this problem was taking far too much time. Instead, I opted for another direction. I would add more featured to an existing visual in this case the Needles function. Then I would simplify the look and visual of the Cubes function. It is not what was in the original plan, however it is my solution considering the time constraints.

## What are you planning to do over the next few weeks?

I plan to finish the visualization and debugging, I also plan on implementing a user interface for media controls.

Are you on target to successfully complete your project? If you aren't on target, how will you address the issue?
